Newer Glads

SPRING 1936

Ernest S. Clark, Jr.

Windsor, Connecticut

★ JAN 30 1936

U. S. Department of Agriculture

I wish to sincerely thank my many glad friends for their generous orders, and for their kind letters of appreciation. If you have not grown my bulbs, I urge that you join the ever widening circle of my Glad Friends. Only true healthy New England-grown bulbs are sent out and I am sure you will be highly pleased with the results.

SATISFACTION GUARANTEED

TERMS: Single bulbs or bulblets at the ten rate, but no single item for less than five cents. 25 bulbs or bulblets at the 100 rate; 250 at the 1000 rate. Pints and half pints in generous measure at the quart rates. Pre-paid spring delivery on all orders over \$2.00—except for F. O. B. prices.

Cash, please. With the following extras of your selection: On orders up to \$5.00 you may select 10% in extra bulbs; \$5 to \$10, 15% in extra bulbs; \$10 to \$20, 20% in extra bulbs; Over \$20.00 30% in extras. If you purchase large bulbs only in lots of 25 or more and will call for them or pay express charges, you may take a cash discount of one-third instead of extra bulbs. The above extras and discounts do not apply to F. O. B. quotations. Gratis bulbs for the names of your glad-loving friends.

SATISFACTION GUARANTEED

My bulbs for 1936 are the best I have had for several seasons. There are a limited number of extra large jumbo bulbs. If you wish them, so specify and be sure to get your order in early. The bulbs I prefer to grow myself and will use in filling orders are plump high crowned stock from bulblets or small planting stock. The sizes indicated by (L) large, Medium (MED), and (S) small are those common to the trade. Large bulbs can be depended upon for the finest spikes. Medium sized bulbs will prove very satisfactory. Small bulbs may do well. Bulbs from $\frac{1}{4}$ " to $\frac{3}{4}$ " in diameter are sold as small bulbs. However, I have such liberal quantities that, in so far as possible, only bulbs of the larger diameter will be sent out as small bulbs. The asterisk * indicates that 100 bulbs of that variety will be sold at 8 times the price per 10. Also, varieties in the 40-25-15 range, such as Aflame, Aida, Yvonne, may be purchased in sizes per 100 as follows: No. 2, \$3.20; No. 3, \$2.40; No. 4, \$1.80; No. 5, \$1.20, No. 6, 80c.

GLAD GOSSIP

Among the real tall growers are Aflame, Bagdad, Deboniar, Princess Josephine, Douglas, G. Dream, Edith Robson, E. Melody and C. Coleman. Albatross, upright placement and bell-shaped florets. Anne Ra—many open but small florets. Bella Donna almost too light a blue. Berty Mair, Sal. Orchid is better, Bill Sowden has very large florets but only 3 or 4 open at once. Try some of the extra early varieties. True, they are not so much when the later ones come along, but, before the latter appear, they seem mighty fine. C. Clusius an appealing shade but so apt to crook. Cath. C. still mighty hard to beat in Show or Shop. Christabel looks promising, but late. Dream of Beauty, a very attractive color, as opposite placement as Henry Ford, but very popular with all visitors. Every one seems to have a good word for Edith R. Emile A. and Marmora seem to be losing their pep, hard to get good spikes. Gertrude S. a lot open but rather small florets. Jean Du T. used to make nice heavy spikes but Emma now is to be preferred. Heritage perhaps a bit lacking in color, but opened up 10 in the very hottest weather—nice flower heads but some stems very short. Grand Slam crooks easily. J. White too short and stubby. Mam. White wonderful one season and mediocre the next—apparently with the bulbs, which some seasons divide like primis. Bulbs and husks are tender so it is quite difficult to get those nice bright shiny bulbs—others in the same fix Christabel, Libelle, J. White, J. V. Tets, Phipps and more of the blue. Slow propagators—Mrs. Anna P., Hercules, Moorish King, J. V. T., Taro, Laidley, Lindesta. Laidley vs Cuthbertson the former with larger blooms and more color in the throat—the latter more open and a bit more color on the edges of the petals. Try Mary Elizabeth and plant it early. Moorish King, the best of the black glads, but Dr. Hoeg looks not so bad. Mother M., probably the most popular smoky now, with Bagdad coming along. Mrs. R. P. flakes too easily and so often spoils some wonderful spikes. Dr. M. is another that freckles easily. Cut Mrs. S. A. when the buds show color or a very hot day will fade out the rich orange. Red Phipps has the Phipps type of growth and spike but not as many open—a very nice red. Miss Greeley is about 3 weeks earlier than Phipps, Phipps itself may open 16 or so but is more likely to show up with 8 or so on a stubby spike. Queen Mary makes wonderful spikes of color but to get some fit for the show is another thing. Schwabengirl may come short. Smiling Maestro one of the best of the newer ones, also include Star of Bethlehem, Tip Top, Trevonian, King Arthur, Mary E., Red Lory, Maid of Orleans, Mildred Louise. Star Prince but 2 or 3 open. Snow Bound won the seedling cup at the Boston Show a couple of years ago. Watch it. Wasaga a more beautiful shade than Duna but not as vigorous. Sal. Orchid a very nice thing but the bulblets are hard to start. Pelegrina vs Blue Admiral, the latter taller, stronger stalks, larger florets but not as many open. Veilchenbleu a shorter grower. Of the lighter blues, Blue Danube and Ave Maria do best for me. Blue D. is a much better doer in spike and bulbs than Libelle. Milford may be too pale a color. I was much impressed with Max Regur from bulblets. The best doer from bulblets the past season—Early Dawn; from No. 6 Olive Goodrich and Picardy. The first ten to bloom for 1935, Midbloom, Excellence, Fanny Crosby, Sweet Lavender, Miss Joy, Gold Eagle, Cara Mia, Miss Bloomington, Schwabengirl, and Aida. Many other extra earlies were from bulblets only, son can not list them. The next ten, Taro, Gladdie Boy, Prof. Slogteren, Mary Frey, C. Clusius, H. C. Goehl, Boynton, Yvonne, Berty Snow, Moody.

Join the Connecticut Gladiolus Society if you live nearby. You will be warmly welcomed by its members. Send dues of \$2.00 to Howard T. Munson, Warehouse Point, Connecticut.

1935 reports on thrips are very cheerful. Almost without exception, thrips were less harmful. Many growers discontinued spraying after midseason. However I suggest that preventive and control measures be not relaxed.

Successful control measures include the following:

(1) Treat the bulbs with Cyanogas-G or other fumigant upon cleaning the bulbs in the fall. Small quantities of bulbs may be put in paper bags or shoe boxes and sprinkled with naphthalene flakes—1 ounce per 100 lbs. Let the flakes evaporate. (2) Store in a cool, dry place and keep at a temperature of 40-50 degrees. Do not let the bulbs freeze. (3) Treat or soak in a solution of bichloride of mercury (corrosive sublimate) before planting. Husk the bulbs previously, if possible. Soak for two hours in a solution of 1.1000, one tablet to one pint of water. Use stone crocks, glass jars, or wooden tubs—not a metal container. Large numbers of bulbs may be tied in sacks and kneaded on the floor in lieu of husking. Thorough soaking will destroy all thrips and their eggs. (4) Spray every week or ten days after the plants are six inches high. Do not wait until the bud spikes appear. It is too late then. Effective spraying will control those thrips that have survived or that may appear from nearby infestations. The cheapest and most effective spray now seems to be a combination of molasses or white sugar, and paris green or arsenate of lead—one pint of molasses to two tablespoons of paris green to three gallons of water. Keep the solution well stirred. An overdose of paris green will severely burn the foliage or even kill the plants. Arsenate of lead will not burn, sticks to the foliage better, but shows up plainly on foliage. Black-leaf 40 may be added if desired. Apparently, thrips have a “sweet tooth” and thus get the poison. Other and more expensive materials are Cubor, Red Arrow and Lethane. (5) Destroy all refuse such as old blooms, tops, and old corns. (6) Plant early. Early varieties will probably come thru without spraying.
